phosphonate metabolism protein [imported] - Nostoc sp. (strain PCC 7120)
(Species Nostoc sp. PCC 7120
A.Note: Nostoc sp. strain PCC 7120
C.Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 09-Dec-2002
C.Accession: AE2083
R.Kaneko, T.: Nakamura, Y.: Wolk, C.P.; Kuritz, T.; Sasamoto, S.; Matanabe, A.; Irriguchi Nakazaki, N.; Shimpo, S.; Sugimoto, M.; Takazawa, M.; Yamada, M.; Yasuda, M.; Tabata, S.; Natere Genomic Sequence of the Filamentous Nitrogen-fixing Cyanobacterium Ana A;Reference number: AB1807; MuID:21595285; PMID:11759840
                                                                                                                   A Status: preliminary
A Molecule type: DNA
A Molecu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

"RNA segment 5 of broadhaven virus, a tick-borne orbivirus, shows sequence homology with segment 5 of bluetongue virus.";

Virology 179:482-484(1990).

-!- FUNCTION: THE VPS PROTEIN IS ONE OF THE TWO PROTEINS (WITH VP2) WHICH CONSTITUTE THE VIRUS PARTICLE OUTER CABSID.

-!- SIMILARITY: BELONGS TO THE REOVIRUSES VPS FAMILY.
                                  GRADIENT ACROSS THE MEMBRANE. CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(1n) = ADP + phosphate
                                                                                                                                  -!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON

"Cloning, expression, and tissue distribution of the rat nicotinamide adenine dinucleotide-dependent 11 beta-hydroxysteroid dehydrogenase.",
Endocrinology 136:3729-3734(1995).
FUNCTION: Catalyzes the conversion of cortisol to the inactive metabolite cortisone. Modulates intracellular glucocorticoid receptor from occupation by glucocorticoid receptor from occupation by glucocorticoid.
--- CATALYTIC ACTIVITY: An 11-beta-hydroxysteroid + NAD(+) = an

11-oxosteroid + NADH.

similarity).
--- SUBCELLULAR LOCATION: Microsomal.
--- TISSUE SPECIFICITY: Highly expressed in kidney, adrenal gland and distal colon. Detected at much lower levels in lung.
--- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases (SDR) family. This SWISS-PROT entry is copyright. NATURE 390. (249-256 (1997).

-I FUNCTION: CHEMOTACTIC-SIGNAL TRANSDUCERS RESPOND TO CHANGES IN THE CONCENTRATION OF ATTAACTANTS AND REPELLENTS IN THE ENVIRONMENT, TRANSDUCE A SIGNAL FROM THE OUTSIDE TO THE INSIDE OF THE CELL, AND FACTILITAES SENSORY ADAFTATION THROUGH THE VARIATION OF THE LEVEL OF METHYLATION. ALL ANINO ACIDS SERVE AS ATTRACTANTS IN B.SUBTILIS, THEY APPEAR TO CAUSE AN INCREASE IN THE TURNOVER METHYL GROUPS, LEADING TO METHYLATION OF AN UNIDENTIFIED ACCEPTOR, WHILE REPELLENTS HAVE BEEN SHOWN TO CAUSE A DECREASE IN METHYL GROUP TURNOVER. THE METHYL GROUPS ARE ADDED BY A METHYLERANSFERASE AND ENDOYED BY A METHYLESTRASE.

-!- SIMILARITY: Contains 1 HAMP domain.

I ENCYMPHETIC PATHWAY OF ACTINOMYCIN.
C -1 - CATALYTIC ACTIVITY: 4 4-methyl-3-hydroxyanthraniloyl pentapeptide + 3 O(1) = 2 actinomycinic acid + 6 H(2)O.
C -1 - COFACTOR: THIS PROTEIN BELONGS TO THE MULTICOPPER CXIDASES WHICH CONTAIN THREE DISTINCT CU CENTERS KNOWN AS TYPE 1 OR BLUE, TYPE 2 OR NORMAL, AND TYPE 3 OR COUPLED BINUCLEAR (BY SIMILARITY).
C -1 - SIMILARITY: BELONGS TO THE FAMILY OF MULTICOPPER OXIDASES.
C -1 - SIMILARITY: BELONGS TO THE FAMILY OF MULTICOPPER OXIDASES.
C -1 - SIMILARITY: BELONGS TO THE FAMILY OF MULTICOPPER OXIDASES.

Phospho-D-glyceroyl phosphate.

-! CAPATATIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroyl phosphate.

-! PATHWAY: Second phase of glycolysis; second step.

-! STMCHARTY: Relonge to the phosphoglycerate kinase family.

-! STMCHARTY: Belongs to the phosphoglycerate kinase family.

-! STMCHARTY: Accounty in the phosphoglycerate kinase family.

-! STMCHARTY: Belongs to the phosphoglycerate family.

Inflance parious = (FIMG2) [MIM.254210]; also known as CMS-EA.
FIMG2 patients have myasthenic symptoms since birth or early infancy, negative tests for anti-AChR antibodies, and abrupt episodic orises with increased weakness, bulbar paralysis, and apnea precipitated by undue exertion, fever, or excitement.
Inheritance is autosomal recessive.

"An integrated analysis of the genome of the hyperthermophilic archaeon Pyrococcus abyssi.";
Mol. Microbiol. 47:1495-1512 (2003).
-!- FUNCTION: Gatalyzes the interconversion of 2-phosphoglycerate and 3-phosphoglycerate (By similarity).
-!- CATALYITY: 2-phospho-D-glycerate = 3-phospho-D-glycerate.
-!- SIMILARITY: BELONGS TO THE BPG-INDEPENDENT PHOSPHOGLYCERATE MUTASE FAMILY. A-PGAM SUBFAMILY. Orsay; STRAIN=GES / Ors PubMed=12622808;

Lo cytoskeletal protein tyrosine phosphatase with homology to cytoskeletal protein tysosine phosphate sea. Commun. 203:479-484(1994).

Lo cytoskeletal protein tylosine phosphate + H(2)O = protein cytosine + phosphate + H(2)O = protein cytosine + phosphate.

C -! CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein cytosine + phosphate.

C -! TISSUB SPECIFICITY: THYMUS, IN CELLS OF BOTH HEMATOPOIETIC AND NON-HEMATOPOIETIC ORIGINS.

C -! SIMILARITY: BELONGS TO THE NON-RECEPTOR CLASS OF THE PROTEIN
TYROSINE PHOSPHATASE FAMILY.

-!- DISEASE: Defects in TCOF1 are the cause of Treacher Collins syndrome (TCS) [MIMI:154500]. TCS is an autosomal dominant disorder of cranofactal development that occurs with an incidence of 150,000 live births. The clinical features of TGS are bilaterally symmetrical and include: (1) abnormalities of the external ears atresia of the external ears atresia of the external ears canals, and malformation of the middle ear ossicles, which may result in conductive hearing loss; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A.
